# TROPICAL CROPS

MANGO, PINEAPPLE, AVOCADO, BANANA, COFFEE, COCOA - Maximise yield and protect tropical crops

High quality biological solutions to obtain maximum potential on modern farms. Our bioactive compounds are obtained using our exclusive **Enzyneer®** technology, which act on plants, quickly penetrating their metabolism and strengthening the necessary functions at any given time to optimise physiological processes.
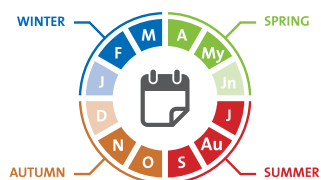

TERRA-SORB RADICULAR

· **When?:** With the fertilisation programme.

· **Results in the field:** Stimulates absorbent hairs and improves the absorption of fertilisers.
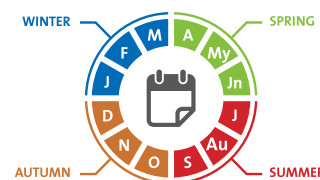

· **Dose:** 10-15 litres/ha

TERRA-SORB COMPLEX

· **When?:** Plant development and deficiency stress.

· **Results in the field:** Plants recover quickly from stress and growth of the plant.
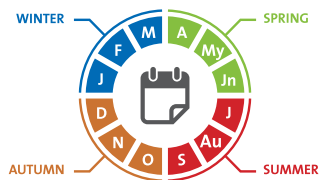

· **Dose:** 2-3 litres/ha

INICIUM

· **When?:** Plantation, start of root activity.

· **Results in the field:** Quick-starts root activity after transplant stress. More growth.

· **Foliar dose:** 10-12 litres/ha

AMINOQUELANT - K low pH

· **When?:** During fruit development.

· **Results in the field:** Bigger fruit size, higher sugar content, more intense fruit colour.

· **Foliar dose:** 2-5 litres/ha

AMINOQUELANT - CA

· **When?:** Before flowering and after fruit set.

· **Results in the field:** Improves flowering, fruit set and development without B and Ca deficiency disease.
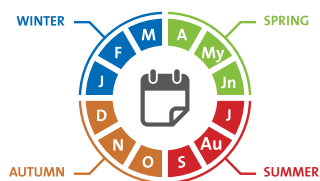

· **Dose:** 2-5 litres/ha

AMINOQUELANT RANGE

· **When?:** In cases of stress caused by specific deficiencies.

· **Results in the field:** Rapid physiological and deficiency correction.

· **Dose:** 2-4 litres/ha

ARMUROX

· **When?:** Throughout the entire growth cycle.

· **Results in the field:** Reinforces plant tissues, making plants less susceptible to fungal pathogen agents.
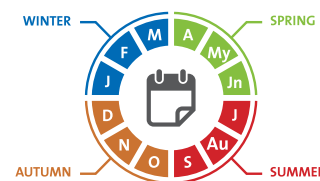

· **Dose:** 3-8 litres/ha

CERA TRAP

· **How to use:** For heavy trap density, hang 50 to 100 traps/ha, depending on the crop, at least 45 days before harvesting the fruit.

EQUILIBRIUM

· **When?:** Apply during the crop production period, encouraging flowering, setting and fruitification.

· **Results in the field:** Improves fruit set and increases yield.

· **Dose:** 2-3 mL/L
